Dear Hiring Manager,

I am looking for Full-stack Developer position. I have a completed Bachelor's degree in Computer Science, education in Front-end Development from Noroff, and hands-on experience in both front-end and back-end development through internships, team projects, and my own projects.

My technical stack includes:
• **Frontend:** JavaScript, TypeScript, React.js, Next.js, Redux Toolkit, Zustand, Tailwind CSS
• **Backend:** Node.js, Express.js, Fastify.js, Prisma ORM, MongoDB, PostgreSQL, MySQL, ClickHouse, REST APIs
• **Other technologies and tools:** Python, Java, Git/GitHub, CI/CD, Docker, Playwright, Vitest, Prebid.js, Figma, responsive/adaptive design

I have completed a **Bachelor's degree in Computer Science at the National Transport University in Ukraine** and **Front-end Development studies at Noroff School of Technology and Digital Media in Norway**. I have also taken additional Information Technology courses at **OsloMet**, where I studied subjects related to programming, algorithms, databases, web development and other areas of IT.

Over the past few years, I have also completed several intensive training programs, including a six-month Full-stack Development Bootcamp, SoftServe's Front-end Project-Based Learning program, and Hillel IT School's Deep Node.js course.

My practical experience started with developing landing pages for local clients, where I worked with responsive design, UI/UX and JavaScript. Later, I completed a full-stack internship at **Adtelligent (Bidmatic)**,

working with React, TypeScript, Tailwind, Zustand, Node.js, Fastify, Prisma, MongoDB and ClickHouse. The project included different parts of a full-stack platform, from frontend components and APIs to databases and statistics. An important part of the internship was also learning the company's AdTech stack and working with advertising implementation and configuration through Prebid.js.

Alongside my studies and internships, I have built several full-stack projects where I have worked with authentication, REST APIs, databases, testing, deployment and both frontend and backend architecture. This has given me experience with the complete development process rather than only one part of the stack.

I am currently looking for an opportunity where I can use what I already know, gain professional experience and continue developing as a software engineer. I am particularly interested in full-stack development because I enjoy working across different parts of a system and want to keep my technical direction broad.

I would be happy to discuss how my experience and technical background could be useful to your team.

Warm regards,
Nadiia Balitska
